## // how i work

I take full responsibility for a project once I'm on it: planning the stack, building it, launching it, and staying involved to track performance after that. Clients don't need to manage the technical side themselves.

## // summary

I'm a full-stack developer who builds websites and products that make sales, not just websites that look nice. I've built **25+ marketing websites** with custom CMS setups, and I've built and owned **SaaS platforms and mobile apps** from the ground up. I move comfortably across the stack: backend, frontend, infrastructure, and the marketing side, understanding what customers want and turning that into features that convert. Clients trust me to run a project end to end without needing to manage the technical details themselves.

## // experience

Full-Stack Developer2022 — 2024

Senu Studio

- Worked as a full-stack developer at Senu Studio, a creative agency building sites for marketing and business clients.
- Built and shipped **25+ marketing websites**, most running on custom CMS setups so clients could manage their own content without touching code.
- Added advanced features tailored to each client: dynamic portfolio systems, lead capture flows, booking systems, and custom admin dashboards.
- Built senu.studio itself, the agency's own site, which has grown to **2M+ visits**.
- Owned each project end to end: frontend, backend, deployment, and SEO, working directly with clients from the first call to launch.

stack: Next.js · Django · Tailwind · PostgreSQL · Custom CMS

Freelance Full-Stack Developer2024 — Present

Independent, remote (Upwork & direct clients)

- Went independent to work directly with clients on SaaS platforms, mobile apps, and marketing sites, taking full responsibility for each project from planning to launch.
- Built SceneYard, a subscription SaaS platform for motion designers. Planned the stack and built the full product, now at **20,000+ signups** and **300+ indexed pages**.
- Built Castform, an AI voice agent SaaS platform, owning the architecture and full-stack development.
- Built the backend for My Story, a mobile app published on Google Play.
- Delivered marketing and corporate websites for clients across Egypt, Iraq, and the wider Middle East, including **EMAAL Business Space**, **Aldamen United**, and **AL SAIF Law Firm**, Iraq's oldest law firm.
- Comfortable taking full ownership of a project: architecture, build, launch, and staying involved afterward to track performance and growth.

stack: Next.js · Django · FastAPI · Cloudflare Workers/D1/KV/R2 · PostgreSQL · Stripe

// education

B.Sc. Computer & Information Science

Mansoura University  
2020 - 2024 · Grade 84%

- PR member, ICPC Team
- Data Science & PR member, CAT Reloaded

// what i handle

Architecture, full-stack build, payments, email infrastructure, SEO, and conversion. I also track performance after launch with Microsoft Clarity and Google Analytics.

// selected projects

SceneYard

sceneyard.com

SaaS subscription platform for motion designers. Full-stack build with payments, email infrastructure, and SEO. 20,000+ signups, 300+ indexed pages.

role: planned & built end to end

Castform

castform.io

AI voice agent SaaS platform. Owned the architecture and built the product across the full stack.

role: planned & built end to end

My Story

Google Play

Mobile app published on Google Play. Built the backend that powers it.

role: backend developer

Senu Studio

senu.studio

Creative agency site with 2M+ visits. Dynamic portfolio system, lead generation, and conversion-focused pages.

role: full-stack developer

EMAAL Business Space

emaalbs.com

Corporate site for a leading Iraqi business group, with a custom no-code dashboard to manage blog content and events like the Iraq Business Summit.

role: full-stack developer

Aldamen United

damenunited.com

Premium corporate site for a major Middle Eastern investment and development firm, with multi-country operations and a multi-million dollar project portfolio.

role: full-stack developer

AL SAIF Law Firm

saiflaw.com

Site for Iraq's oldest law firm, 46+ years in business and 1,000+ companies served. Dynamic news, legal calculators, and a free consultation booking flow.

role: full-stack developer

SherHub

sherhub.com

Conversion-focused frontend, built for clean UI, speed, SEO, and a clear user journey from landing to action.

role: full-stack developer
